Philips Comment:

Philips acknowledges and appreciates the FCC's actions on reassessment of radiofrequency exposure limits and policies regarding human exposure to such RF EMFs.

In particular we appreciate the following elements

- The proposal to exclude devices from labeling requirements if the responsible parties demonstrates by any appropriate means that MPE or SAR limits could not be exceeded regardless of proximity to the antenna
- The FCC's continued effort to clarify the responsibilities of licensees and grantees and to ensure compliance with its RF exposure rules in a more practical, consistent and efficient manner.

In view of the emerging application of low-power wireless transceivers in domestic appliances and lighting technologies it will be important also that the wireless technologies applied in such applications are either inherently compliant with the RF exposure limits or the recurring effort and cost to demonstrate compliance with the exposure limits should be minimum.
